

## LAB 3 REPORT

1. My application landing page.

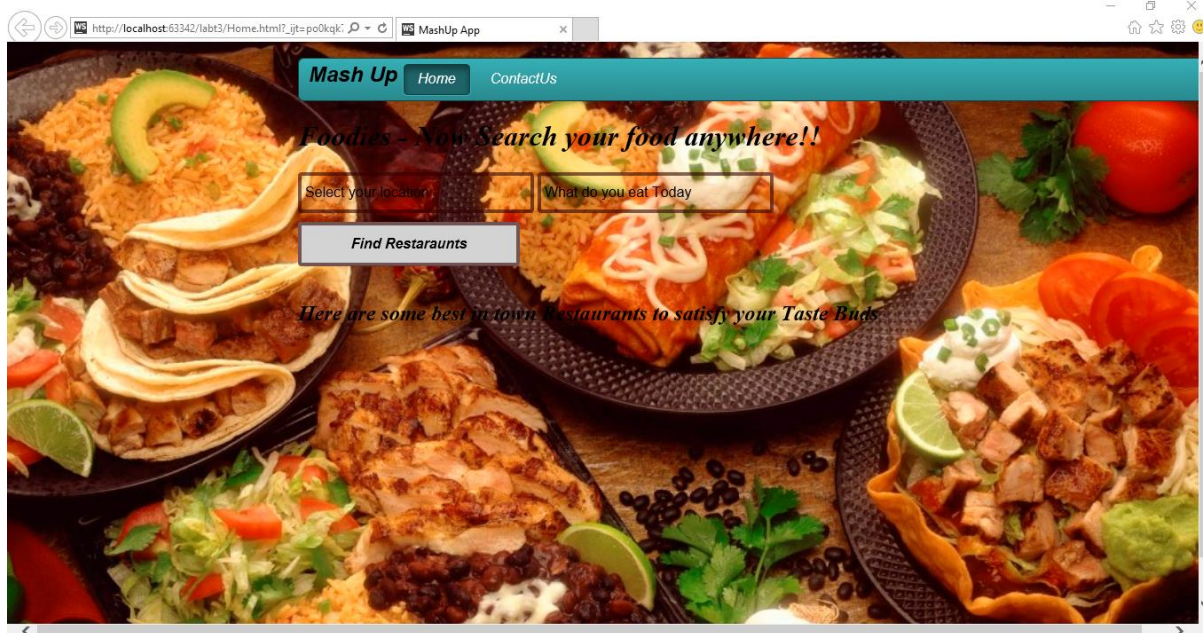

2. Login to application using Facebook OAuth 2.0 Service.

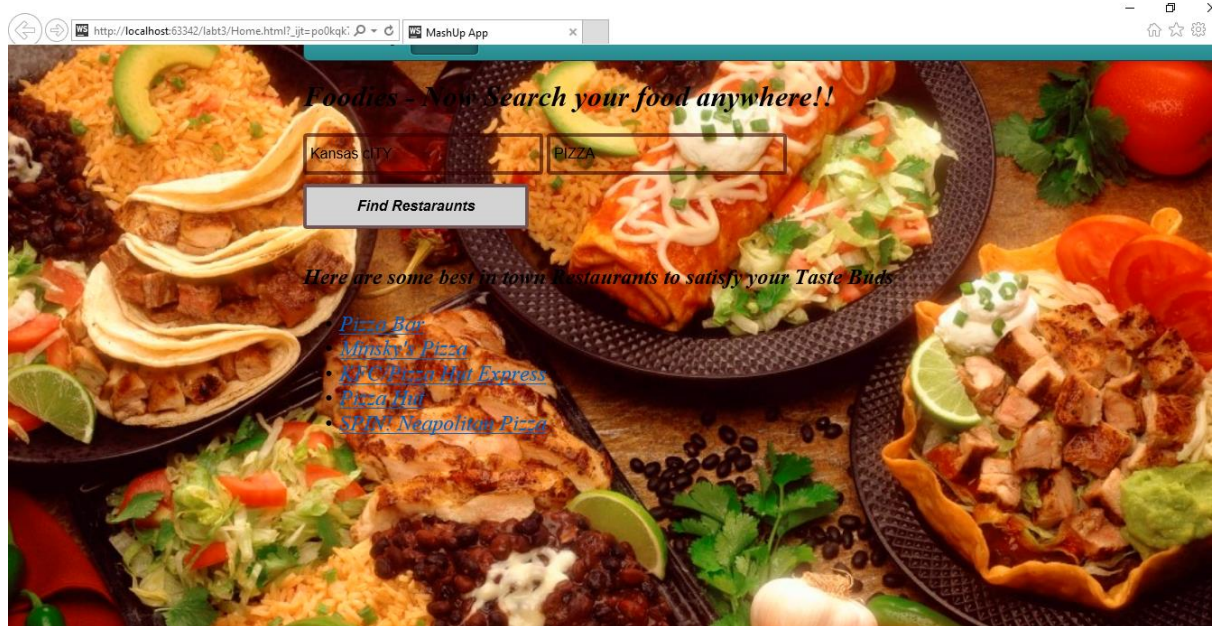

### 3. Home Page.

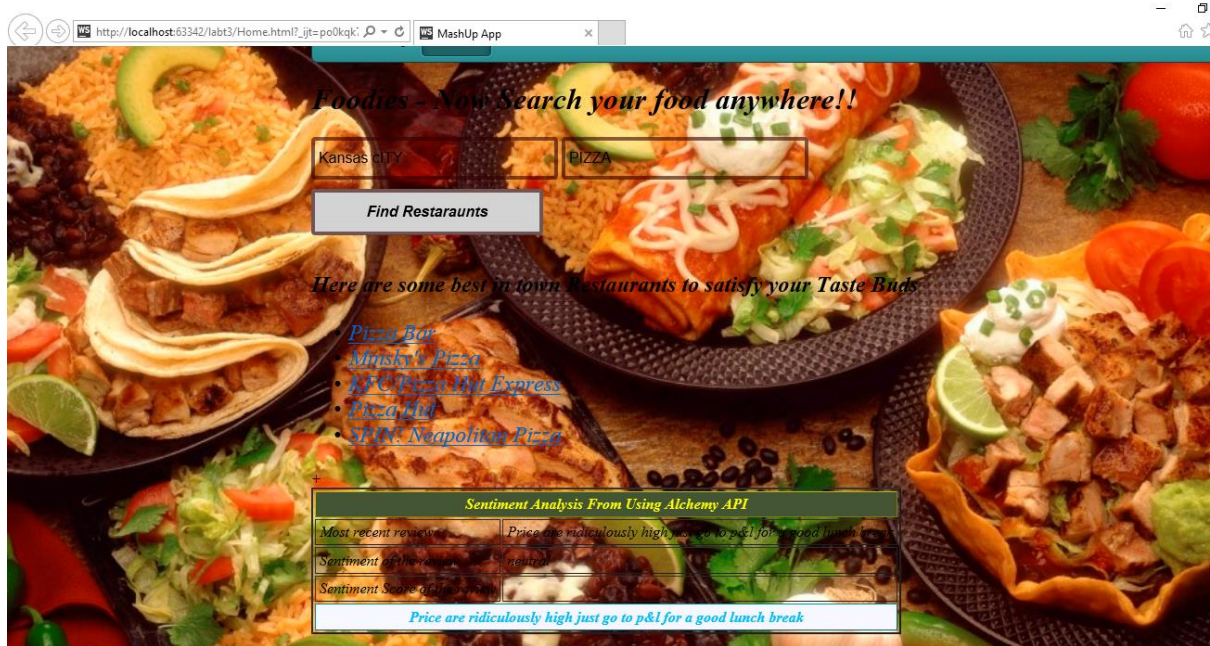

### 4. Mash Up of 2 API's

### 5. Search to find Restaurants in any given location using Foursquare API service.

## 6. Sentiment Analysis Using Alchemy API.

The screenshot shows a web browser window with the address bar displaying `http://localhost:63342/lab13/Home.html?_ijt=po0kqk` and a tab labeled "MashUp App". The web page has a background image of various food dishes. At the top, it says "Foodies - Now Search your food anywhere!!". Below this, there are two input fields: "Kansas City" and "PIZZA". A button labeled "Find Restaurants" is positioned below these fields. Underneath the button, the text reads "Here are some best in town Restaurants to satisfy your Taste Buds". A list of restaurant names is displayed, each preceded by a bullet point: [Pizza Boy](#), [Minsky's Pizza](#), [AFC Pizza Hut Express](#), [Pizza Hut](#), and [SPIN! Neapolitan Pizza](#). Below the list, there is a section titled "Sentiment Analysis From Using Alchemy API". This section contains a table with three rows and two columns. The first row shows "Most recent review" and "Price are ridiculously high, as go to p&l for a good lunch break". The second row shows "Sentiment of the review" and "neutral". The third row shows "Sentiment Score of the review" and a numerical value. Below the table, a blue text box contains the sentence "Price are ridiculously high just go to p&l for a good lunch break".
